DATE: 29th May 2025

Subject: **Disproportionality in Custody**

1. Purpose of the Report

The purpose of this report is to investigate whether there are any variations in the manner that persons are dealt with within Custody according to the ethnicity of the detainee.

2. Findings

During the period 1st October 2024 to 31st March 2025, 8,067 individuals were dealt with within one of the Custody Suites within Leicestershire (some on more than one occasion).

These have been examined according to their Self Defined Ethnicity

The elements of custody that have been examined are :

- Initial Arrest
- Use of Force in Custody
- Final Disposal
- Use of Bail
- Use of Released under Investigation
- Observation Levels
- Involvement of Health Service Professionals / L&D assessments
- Involvement of Appropriate Adults
- Length of Time spent in Custody

The analysis of those initially arrested are a comparison to the total population of the Force area, the remainder are compared to the "Custody Population" with the exception of the use of Appropriate Adults where the comparison is to those detained who are deemed "vulnerable", either by way of a vulnerability type flag or by nature of their age (under 18).

Initial Arrest

The table below compares the demographics of the persons detained in custody to the population of the Force area, although some persons may be arrested on multiple occasions and would hence count on several occasions as detainees.

There is also a possibility that some of the detainees are not resident in Leicestershire but committed (or were suspected of having committed) offences and been arrested in Leicestershire.

Not Religious	387,240	1,224	36.5%	60.7%	Higher

Whilst the table shows numerical differences, the only significant differences when comparing persons of White ethnicity to those of other ethnicities is that persons of Asian ethnicity are less likely and those of Black ethnicity are more likely to be arrested than would be expected given the proportion of the population that they represent. It is worth noting that this is exactly the same situation as when the analysis was completed previously (for the previous 12 month's detentions).

For statistical context, the assessment of the ratios between the norm (which has been considered to be arrestees of White ethnicity) and arrestees of Black ethnicity actually equate to be somewhere between 1.6 x and 4.0 x, the figure in the table merely represents the mid point of the actual calculation. This is because the numbers of persons involved is relatively small both of the ethnicity being arrested and of people being arrested.

Whilst the table shows several other "differences" in the other demographic elements, much of this can be explained both by the nature of criminality and the more detailed profile of the population. For instance there is a likelihood that the demographic of older persons is of a higher proportion of UK nationals of White ethnicity than of younger persons.

Use of Force in Custody

There are no disproportionalities in the use of force in custody once a person is in custody when comparing those of non White ethnicity to those of White ethnicity, However, more people aged 31 to 41, of Female gender, White ethnicity, UK nationality and Non Religious had force used on them in Custody than would have been expected given the profile of persons booked into Custody in the first place.

Final Disposal

The detentions of significantly more persons of White ethnicity result in a Positive outcome (Charge or Out of Court disposal type) than in other ethnicities. However, no other ethnicities have significantly different proportions when compared to persons of white ethnicity.

In terms of other elements, detentions of significantly more persons of UK nationality and in the 31-40 age banding result in a Positive outcome (Charge or Out of Court disposal type) than in other demographic groups.

This may be as a result of the nature of the criminal activity that these people are being arrested for as it is possible that positive outcomes are easier to achieve for some offence types than for others, particularly since the analysis considers “final disposals” and 20% of the instances being analysed are not finalised at the time of the analysis.

Use of Bail and/or Released under Investigation

There are no significant differences between demographics in the utilisation of Bail and RUI.

Observation Levels

There are no particular differences between demographics in how Observation Levels in custody are applied, although persons of White ethnicity and UK nationality are slightly more likely to be placed at the higher levels than persons of other demographics.

Appendix 1 shows the data by ethnicity for each of the Observation Levels.

Health Service Professionals

More people of Female gender, White ethnicity and UK nationality had the involvement of a Health Service Professional in Custody than would have been expected given the profile of persons booked into Custody in the first place. But there are no significant differences comparing people of other ethnicities with those of White ethnicities.

Length of Detention

UK Nationals are more likely to be detained for shorter periods (less than 4 hours) than persons of other demographics, however, people aged 31 to 40 are more likely to be held for longer periods (24 to 36 hours).

Whilst persons of UK Nationality does appear in several of these potential variances, it appears not to be a mandatory field on Niche so data maybe slightly skewed if a disproportionate number of the "Not Recorded" nationalities are actually UK.

Appendix 2 shows the comparisons by ethnicity by length of detention.

3. Conclusion

Notwithstanding numerical variations, there is little significant statistical evidence to suggest that persons are being dealt with differently whilst in detention as a result of any differing demographics.
